Appln. No. 09/720,300 Amendment Dated June 13, 2003 Reply to Office Action of December 13, 2003

Amendment to the Abstract:

The Abstract has been amended. A revised Abstract is attached.

The invention relates to a A device for intermittent compression of human extremities such as, for instance, the region of the calves, to assist the return of body fluid in the direction of the heart. The device comprises a cuff and a pressure generator, which intermittently pressurizes the cuff, the cuff comprising in the direction of return a width of maximally 25-cm centimeters. The device further comprises a pressure generator that can be secured directly to the cuff or secured to the body or to clothing. A This highly compact, handy configuration enables mobile application of the device in every-day situations to assist physical well-being.
